PREFACE

The Missouri Division of Alcohol and Drug Abuse has prepared this Thirteenth Edition of the *Status Report on Missouri's Alcohol and Drug Abuse Problems*. This annual report includes data tables and charts that identify and illustrate alcohol and drug abuse trends and consequences. Survey data provide comparisons of Missouri and national use of alcohol, tobacco, illicit drugs, and prescription drugs.

County-level data quantify substance abuse problems throughout Missouri and the demographics of thousands of consumers receiving treatment and intervention services in programs managed by the Division of Alcohol and Drug Abuse.

Additional information on prevention, treatment, and compulsive gambling services is available from the Division's district and satellite offices located in Kansas City, Saint Louis, Jefferson City, Springfield, and Rolla. Contact information for those offices is provided on the map in the appendix.

Inquiries pertaining to the Status Report should be directed to the Division's Research and Statistics section. The 2002-2007 editions are accessible on the Division's website at:

<http://www.dmh.missouri.gov/ada/rpts/status.htm>

Sincerely,

A handwritten signature in black ink, appearing to read "Mark Stringer".

Mark Stringer

The Department of Mental Health does not deny employment or services because of race, sex, creed, marital status, religion, national origin, disability or age of applicants or employees.

ACKNOWLEDGMENTS

The Missouri Division of Alcohol and Drug Abuse is grateful for the contributions of these individuals from other state agencies who provided data and information presented in this report:

Ron Beck, Missouri Department of Public Safety

Phyllis Emmel, Missouri Department of Public Safety

Keith Gast, Missouri Department of Revenue

John Harper, Missouri Department of Elementary and Secondary Education

Hans Huenink, Missouri Department of Public Safety

Gayla Jenkins, Missouri Department of Public Safety

Rebecca Kniest, Missouri Department of Social Services

Benjamin Laffoon, Missouri Department of Health and Senior Services

Tracy Lehmen, Missouri Department of Public Safety

Kirsten Lenz, Missouri Department of Social Services

David Litchfield, Missouri Department of Health and Senior Services

Glen Mieir, Missouri Department of Corrections

Kevin Miller, Missouri Department of Elementary and Secondary Education

Richard Parsons, Missouri Department of Mental Health

Dewayne Sprenger, Missouri Department of Public Safety

Kim Taliaferro, Missouri Department of Elementary and Secondary Education

Lois Thomas, Missouri Department of Mental Health

Margaret Tyler, Missouri Department of Health and Senior Services

Mark VanTuinen, Missouri Department of Health and Senior Services

INTRODUCTION

The *Status Report on Missouri's Alcohol and Drug Abuse Problems* is issued annually by the Missouri Department of Mental Health, Division of Alcohol and Drug Abuse. The purpose of this document is to support research, education, policy-making, planning, and evaluation activities. The report provides a consistent set of year-to-year data on alcohol and drug usage rates and reported events that result from substance abuse. It also summarizes the clinical admissions of treatment programs funded by the Missouri Division of Alcohol and Drug Abuse.

Alcohol, tobacco, and other drug usage rates are derived from national and state surveys and surveillance systems. In particular, the annual National Survey on Drug Use and Health (NSDUH) and the biennial Youth Risk Behavior Survey provide comparative Missouri and national data for this report. Other major survey results include the biennial Missouri Student Survey and the nationwide Monitoring the Future survey. Most of the surveys that interview Missouri residents provide only statewide usage estimates. The NSDUH, however, provides estimates of substance use, abuse, and dependence for seven sub-state regions identified by the Division of Alcohol and Drug Abuse.

The consequences of substance abuse can be documented using data on reported alcohol and drug related events. These include alcohol or drug impaired traffic crashes and the resulting deaths and injuries, as well as boating crashes and drowning attributed to intoxication. Emergency room episodes, hospitalizations, and death certificates also document the involvement of alcohol and other drugs. Data are also presented on problems and situations that are sometimes related to substance abuse. These correlate indicators include unemployment, crime, and dropping out of school. Most of the data identified above are collected by local authorities and reported to state agencies, so they can be specified by county to facilitate problem analysis. Law enforcement reports, including crashes and arrests, are indexed by county of occurrence. Juvenile court, incarceration, probation and parole, school, and health related data in this report are indexed by county of residence.

Division of Alcohol and Drug Abuse treatment admissions data describe part of the public effort to reduce substance abuse. Admissions data can also be used as problem indicators, sometimes providing the largest set of meaningful localized information. In this report, substance abuse admissions are indexed by county of residence of the consumers receiving services, regardless of the locations of the treatment programs they are utilizing. Admissions are quantified based on nine categories of programs: Adolescent CSTAR, Women and Children CSTAR, General Population CSTAR, Opioid CSTAR, Primary Recovery Detoxification, Primary Recovery Treatment, Recovery Supports, Clinical SATOP, and Other Substance Abuse Treatment. Some clients have admissions in more than one category and accordingly are counted more than once in the general admissions tables. In the demographic profile tables on pages 56-63, clients are counted only once regardless of their number of treatment admissions.

The data in this report are presented in tables and charts. Trend data for substance abuse consequences and treatment admissions are provided in statewide tables for the most currently available calendar or fiscal year and several prior years. Three-year tables provide data for counties and ADA planning regions and service areas, as illustrated on the map in the Appendix. The counties are arranged by their Federal Information Processing Standards (FIPS) code number. Data elements represent calendar years unless preceded by FY, designating Missouri's state fiscal year of July 1 through June 30, or FFY for the federal fiscal year of October 1 through September 30.

ECONOMIC COSTS OF SUBSTANCE ABUSE

Alcohol and other drug abuse problems generate huge economic costs consisting of financial outlays and long-term opportunity losses. Economic studies are occasionally conducted or updated to quantify these impacts in the United States. The estimated nationwide costs of alcohol abuse were \$184.6 billion per year in 1998 and increasing annually. Components of these costs include productivity losses, medical expenditures, fetal alcohol syndrome, property damage, and criminal justice involvement. State-level costs are not determined in the national studies. Missouri has nearly two percent of the U.S. population. Analysis of the National Survey on Drug Use and Health (NSDUH) for 2004 and 2005 reveals that Missouri has an estimated 427,000 residents with alcohol dependence or abuse—2.3 percent of the 18,665,000 nationwide. Using these figures, Missouri's portion of the economic cost of alcohol abuse is estimated to be in the range of \$3.6 billion to \$4.2 billion annually. Based on the economic study and NSDUH, individuals with alcohol problems generate average annual costs of \$9,897.

The societal economic costs of drug abuse were estimated to be \$180.9 billion in 2002. According to the 2004 and 2005 NSDUH surveys, Missouri has approximately 143,000 residents with illicit drug dependence or abuse compared to 7,065,000 nationwide. By applying the methodology used above for alcohol dependence and abuse, the estimated annual drug abuse cost in Missouri is \$3.5 billion to \$3.7 billion. Productivity losses, especially from drug related crime careers and incarcerations comprise roughly 71 percent of society's drug abuse costs. Another 20 percent are criminal justice expenditures and crime victim losses, and nine percent are health care costs for drug related illnesses. The data indicate that the average cost attributed to individuals with illicit drug dependence or abuse is \$25,591 per year.

Based on the 2004 and 2005 NSDUH, there are an estimated 60,208,000 smokers in the United States and 1,429,000 in Missouri. According to studies by the Centers for Disease Control and Prevention, costs attributed to cigarette smoking reached \$173.8 billion in the United States in 2001. The main components of these costs were smoking related productivity losses and health care expenditures. The economic impact of smoking on Missouri was slightly over \$4 billion, consisting of \$2.35 billion for productivity losses and \$1.67 billion for expenditures. Each smoker generated over \$2,800 in economic costs. Missouri had 2.31 percent of the national economic cost of smoking—almost identical to the state's estimated 2.37 percent of the nation's smokers.

CONSUMPTION DATA

A small number of widely-used surveys collect national and state data on alcohol, tobacco, and other drug use. Some of these include questions which indicate alcohol or drug dependence, high-risk behaviors, and the need for treatment or intervention services. Surveys are used to estimate prevalence—the percentage and number of people using alcohol and other drugs within a population. However, most surveys rely on a subset to represent a population and therefore are subject to sampling error. The Missouri estimates, in particular, from the national surveys should be interpreted with caution due to relatively small sample sizes.

National Survey on Drug Use and Health

The National Survey on Drug Use and Health (NSDUH) is administered by the federal Substance Abuse and Mental Health Services Administration. The survey uses a sampling methodology that provides national, state, and sub-state (regional) estimates of alcohol, illicit drug, and tobacco use. The survey collects information on past month (current), past-year, and lifetime use of these substances. The perceived risks of smoking, using marijuana, and binge drinking are probed because many years of data from the NSDUH and the National Household Survey on Drug Abuse (its predecessor) have shown that attitudes and beliefs are good predictors of future use of these substances. Analysis of the NSDUH also yields estimated rates of initiation of use, alcohol and drug abuse, alcohol and drug dependence, and unmet treatment need. Single-year estimates are provided for the national data. Due to smaller sample sizes for the state data, state estimates and comparison national data are based on rolling two-year samples to improve the reliability of the estimates. Sub-state estimates use three-year samples. Data users are interested in the magnitude of the usage rates and in multi-year changes (trends) in these rates. Most apparent year-to-year changes in the Missouri rates are not large enough to rule-out sampling error and conclude that they reflect actual changes in usage. National and Missouri rate changes that meet the statistical tests for significance are noted in the discussions below. The table on page 36 provides national trends in current and lifetime drug use for adolescents and adults age 12 and older, and page 37 provides these rates for specific age groups for recent years. In the table on page 38, data from 2004 and 2005 includes comparisons of national and Missouri rates of current and past-year substance use, dependence, and unmet treatment need. Missouri population estimates based on these rates are provided in the table on page 39.

Alcohol Use: Among Missouri's population at least 12 years of age, the estimated percentage of current (past month) drinkers decreased from 53.21 percent in the combined 2002/2003 survey sample to 49.81 percent in 2003/2004—a statistically significant reduction—and then decreased again to 48.83 percent in the 2004/2005 sample. This latest Missouri rate is two percentage points lower than the U.S. rate of 51.05 percent. Past-month alcohol use rates for Missouri adolescents 12-17 years of age are higher than the U.S. rates and have changed little in recent surveys. The 2004/2005 Missouri rate was 19.96 percent, compared to 20.20 percent in 2003/2004 and 19.67 percent in 2002/2003. By contrast, the national rate in 2004/2005 was almost three percentage points lower at 17.06 percent. Missouri's past-month alcohol use rate is also higher than the national average for young adults 18-25 years of age. Based on the 2004/2005 sample, this age group had a rate of 65.63 percent, compared to only 60.69 percent for young adults nationwide. Missouri's 2003/2004 rate was 63.79 and the 2002/2003 rate was 64.52 percent. Although Missouri's past-month drinking rates are higher than the U.S. rates for the 12-17 and 18-25 age groups, they are lower for those older than age 25. Missouri's estimated drinking rate for these older adults was 49.71 percent in 2004/2005 and continued a downward trend after posting a rate of 51.36 percent in 2003/2004—statistically lower than the 2002/2003 rate of 55.85 percent. Nationwide, the older

adult age group had a rate of 54.03—a statistically significant increase from the 2003/2004 rate of 52.76 percent for past-month alcohol use.

Alcohol Use by ADA Planning Region: Based on the combined NSDUH samples for 2002-2004, the Eastern Region of the Division of Alcohol and Drug Abuse had Missouri's highest past-month drinking rate. The average annual rate for adolescents and adults 12 years of age and older was 57.41 percent. The St. Louis City and St. Louis County area had a slightly higher rate than the remainder of that region. The Northwest Region had the state's second highest rate at 52.36, but the rate for Jackson County (which includes most of Kansas City) was 53.47 percent compared to 51.36 for other parts of the region. The Central Region had a rate of 50.92 percent. The southern part of Missouri had lower rates of alcohol use. The Southwest Region had a rate of 45.04 percent and the Southeast Region had the lowest rate of past-month use of alcohol at 41.89 percent.

Binge Drinking: Binge alcohol use, defined as consuming at least five drinks on a single drinking occasion at least once in the preceding 30 days, has remained virtually unchanged in recent years. Missouri's estimated binge drinking rates for ages 12 and older were 24.56 percent in 2002/2003, 25.12 percent in 2003/2004, and 24.35 percent in 2004/2005. The latest rate is almost two percentage points higher than the national rate of 22.70 percent in 2004/2005 and 22.69 percent in 2003/2004. Among Missouri youth 12-17 years of age, the binge drinking rate was 12.84 percent in 2004/2005 compared to 13.67 percent in 2003/2004 and 12.61 percent in 2002/2003. None of these year-to-year changes are statistically significant. However, Missouri's latest adolescent binge drinking rate remains more than two percentage points higher than the national rate of 10.49 percent. Among young adults 18-25 years of age, Missouri's binge drinking rate was 47.07 percent in 2004/2005—considerably higher than the national rate of 41.54 percent for that age group. Binge alcohol use for Missouri adults over age 25 was 21.82 percent in 2004/2005 compared to 23.09 percent in 2003/2004. The national rate for this age group was 21.07 in 2004/2005.

Binge Drinking by ADA Planning Region: Consistent with past-month drinking rates, the average annual binge drinking rate based on the 2002-2004 NSDUH samples was highest in the Eastern Region at 26.85 percent. The Central Region was slightly lower at 26.35 percent, and the Northwest Region had a rate of 23.54 percent. The Southeast Region had a rate of 23.21 percent and the Southwest Region had Missouri's lowest binge drinking rate at 22.74 percent.

Perceptions of Binge Drinking Risk: The reduction in Missouri's binge drinking rate from 2003/2004 to 2004/2005 was accompanied by a corresponding increase in the percentage of Missouri residents who perceived great risk in binge drinking. In 2003/2004, an estimated 38.06 percent of Missouri's adolescents and adults 12 years of age and older perceived great risk of having five or more drinks of alcohol once or twice a week. In 2004/2005, this rate increased to 39.68 percent compared to the national rate of 41.19 percent. Missouri adolescents 12-17 years of age and adults over age 25 perceived greater risk in binge drinking in 2004/2005 than in 2003/2004 while rates for young adults 18-25 years of age were lower.

Illicit Drug Use: Missouri's estimated past-month use of any illicit drug among the population 12 years of age and older has been declining—from 9.17 percent in the 2002/2003 survey sample and 8.13 percent in 2003/2004 to 7.66 percent in 2004/2005. This latest rate is lower than the U.S. rate of 8.02 percent, which remained virtually unchanged from the national rate of 8.06 percent in 2003/2004. Illicit drug use among Missouri adolescents 12-17 years of age remained virtually unchanged at 10.92 percent, compared to 10.99 percent in 2003/2004, and was slightly higher than the national rate of 10.25 percent. Young adults 18-25 years of age had an illicit drug use rate of 18.28 percent in 2004/2005 compared to the national rate of 19.76 percent. Among adults older than 25, Missouri's rate of 5.32 percent was lower than the U.S. rate of 5.65 percent.

Marijuana Use: Marijuana accounted for most of the illicit drug use. In the 2004/2005 survey sample, an estimated 5.54 percent of Missouri's population age 12 and older used marijuana

during the month preceding the surveys—lower than the nationwide rate of 6.04 percent. More importantly, Missouri's 2004/2005 rate was statistically lower than its 2003/2004 rate of 6.38 percent. The 2002/2003 rate was 6.76 percent. All of the age groups had lower rates of marijuana use than in 2003/2004. Among 12-17 year olds, the 2004/2005 rate was 7.53 percent, compared to 8.17 percent in 2003/2004. Marijuana use rates among Missouri's young adults decreased from 16.47 percent in 2003/2004 to 14.90 percent in 2004/2005 while national rates dipped slightly to 16.36 percent for the 18-25 age group. Past-month marijuana use among Missouri adults over age 25 decreased considerably—from 4.33 percent to 3.60 percent—and dropped below the national rate of 4.07 percent for this age group.

Marijuana Use by ADA Planning Region: Missouri sub-state estimates of marijuana use were calculated by combining the NSDUH samples from 2002-2004. Among the population ages 12 and older, past-month use was highest in the Jackson County portion of the Northwest Region with an average annual rate of 7.71 percent, while the overall rate for that region was 6.63 percent. The Central Region had a rate of 7.16 percent. The Eastern Region's rate was 6.73 percent, but it was considerably higher in the St. Louis City and St. Louis County area at 7.04 percent than in the rest of the region. The Southwest Region had a past-month marijuana use rate of 5.23 percent and the Southeast Region posted the state's lowest rate at 4.73 percent.

Perceptions of Marijuana Risk: Consistent with the declining use rates, the percentage of Missouri residents who perceive great risk in using marijuana once a month has been increasing—from 36.69 percent in 2002/2003 to 38.25 percent in 2003/2004 and 40.82 percent in 2004/2005. Among adolescents 12-17 years of age, the increased perception of risk from 34.20 percent in 2003/2004 to 37.21 percent in 2004/2004 was statistically significant and surpassed the 34.45 percent nationwide adolescent rate. Missouri's young adults had a rate of perceived risk of 24.71 percent—slightly lower than the national rate of 25.03 percent for the 18-25 age group. Among Missouri adults age 26 and older, 44.20 percent perceived risk in using marijuana in 2004/2005 compared to only 41.49 percent in 2003/2005. The U.S. rate for this age group was 42.13 percent in the 2004/2005 survey sample.

Initiation of Marijuana Use: The NSDUH also reports the percentage of the population that began using marijuana during a one-year period. Initial exposure or incidence rates usually influence future prevalence rates. Among Missouri's population of adolescents and adults, annual rates of first use of marijuana increased during the early part of the decade and reached a plateau at about two percent during the years 2002-2004 before declining to an average rate of 1.75 percent in 2004/2005, a statistically significant reduction. Nationwide, the average annual rates of initiation of marijuana use were 1.76 percent in 2003/2004 and statistically lower at 1.68 percent in 2004/2005. In the 12-17 age group, Missouri and the U.S. had dramatic declines. First use of marijuana among Missouri adolescents dropped from average annual rates of 6.90 percent in 2003/2004 to 5.90 percent in 2004/2005, while the nationwide rates for this age group decreased from 6.25 percent to 5.80 percent. Marijuana initiation also declined in Missouri's young adult population 18-25 years of age, from 7.62 percent in 2003/2004 to 6.70 percent in 2004/2005. Among Missouri adults over age 25, first use of marijuana remained very low and virtually unchanged at 0.2 percent.

Cocaine Use: Past-year use of cocaine, including crack cocaine, continued to decline among Missouri's population ages 12 and older. In the 2002/2003 NSDUH sample, 2.90 percent reported using cocaine in the year preceding the survey. This rate decreased to 2.60 percent in 2003/2004 and to 2.46 percent in 2004/2005, compared to the national rate of 2.31 percent. The adolescent age group had a lower rate of past-year cocaine use in 2004/2005 than in 2003/2004, declining from 1.99 percent to 1.70 percent, and use among the older adult age group dropped from 1.83 percent to 1.53 percent. The rate increased from 7.39 percent to 8.17 percent for young adults 18-25 years of age. Adolescents and young adults 12-25 years of age continued to have higher rates of past-year

cocaine use in Missouri than the national rates, but Missouri's rate for adults over 25 years of age was slightly lower than the U.S. rate of 1.62 percent.

Cocaine Use by ADA Planning Region: Based on the 2002-2004 NSDUH samples, the Central Region and the Northwest Region had virtually the same annual average estimates of past-year cocaine use at 3.08 percent and 3.06 percent, respectively. However, Jackson County in the Northwest Region had an estimated rate of 3.44 percent. St. Louis City and St. Louis County had a rate of 3.04 percent—slightly higher than the overall Eastern Region rate of 2.93 percent. The Southeast Region had a past-year cocaine use rate of 2.53 percent, and the Southwest Region was lowest with a rate of 2.36 percent.

Non-medical Use of Prescription Pain Relievers: Past-year illicit use of pain medication by the Missouri population 12 years of age and older decreased from 5.44 percent in the 2003/2004 NSDUH samples to 4.94 percent in 2004/2005. Among Missouri adolescents 12-17, the rate dropped from 8.55 percent to 7.70 percent. Nationally, this age group had a statistically significant reduction from 7.53 percent to 7.13 percent. Missouri's rates for the other age groups also declined, from 13.39 percent to 12.79 percent for the population 18-25 years of age and from 3.59 percent to 3.16 percent for those older than 25.

Non-medical Use of Pain Relievers by ADA Planning Region: Using data from the 2002-2004 NSDUH samples, an annual average of 4.92 percent of Missouri adolescents and adults used pain relievers non-medically in the past year. The rates were highest in the Central Region and the Jackson County portion of the Northwest Region at 5.48 percent and 5.47 percent, respectively. The overall Northwest Region rate was 5.03 percent and the Eastern Region had a rate of 4.78 percent. In contrast to most of the other drugs surveyed, the St. Louis City and St. Louis County area had a lower rate of non-medical use of pain relievers than the remainder of the Eastern Region. The rate for the Southwest Region was 4.75 percent and the Southeast Region had the lowest rate at 4.65 percent.

Tobacco Use: No percentage change occurred in the use of tobacco products by the Missouri population 12 years of age and older. After dropping slightly from 36.69 percent in the combined 2002/2003 NSDUH samples to 36.06 percent in 2003/2004, past-month tobacco use remained at an estimated 36.01 percent in 2004/2005. Although Missouri's overall rate of tobacco use was unchanged, use among adolescents 12-17 years of age declined from 20.33 percent in 2003/2004 to 19.21 percent in 2004/2005. This was offset by an increase in the rate for young adults 18-25 years of age—from 50.78 percent in 2003/2004 to 51.60 percent in 2004/2005. Among older adults, virtually no change occurred.

Tobacco Use by ADA Planning Region: Tobacco product usage is more prevalent in the rural than in the urban areas of Missouri. In contrast to alcohol and illicit drugs, rates of tobacco use are highest in the southern regions. Based on the combined three-year NSDUH samples from 2002-2004, the Southeast Region had a past-month tobacco use rate of 40.77 percent among the population at least 12 years of age. The rate was 37.74 percent in the Southwest Region and 37.25 percent in the Central Region. The Northwest Region had a rate of 36.91 percent, but the rate was lower in Jackson County (primary host county for Kansas City) at 34.74 percent than the 36.05 percent rate in the non-urban portion of the region. Similarly, the Eastern Region rate of 34.97 percent consisted of a much lower rate of 34.02 percent for the St. Louis City and St. Louis County area than the 36.05 percent for the remainder of that region.

Cigarette Use: According to NSDUH estimates, past-month cigarette smoking is declining. Among Missouri's population of adolescents and adults, 31.51 percent were current smokers in 2002/2003. The rate dropped to 30.61 percent in 2003/2004 and further dropped to 29.90 percent in 2004/2005. Among 12-17 year-olds, the rate fell two percentage points in two years—from 17.88 percent in 2002/2003 to 17.14 percent in 2003/2004 and to 15.81 percent in 2004/2005. Rates for

young adults 18-25 years of age dropped from 47.59 percent in 2002/2003 to 45.50 percent in 2003/2004 and to 44.84 percent in 2004/2005. Smoking rates for adults over age 25 dipped from 30.56 percent to 29.11 percent during the same time period.

Cigarette Use by ADA Planning Region: Consistent with regional rates for use of tobacco products, cigarette smoking rates based on the 2002-2004 NSDUH samples were higher in the non-urban regions of the state. Past-month use of cigarettes was highest among the adolescent and adult population 12 years of age and older in the Southeast Region at 35.02 percent, considerably higher than the statewide estimate of 31.10 percent. The Central Region had the second-highest cigarette smoking rate at 31.85 percent, followed closely by a Southwest Region rate of 31.49 percent. The Northwest Region had a past-month smoking rate of 30.32 percent, and there was virtually no difference between rates in Jackson County and the remainder of the region. The Eastern Region had a smoking rate of 29.80 percent, but the St. Louis City and St. Louis County had a rate of 29.30 percent compared to 30.81 percent in the less-urban counties.

Perceptions of Cigarette Smoking Risk: The overall percentage of Missouri residents who perceive great risk in smoking one or more packs of cigarettes per day has not changed appreciably in recent years, although more adolescents are recognizing such risk. Data from the combined 2002/2003 NSDUH samples indicate that 68.02 percent of the Missouri population 12 years of age and older perceived great smoking risk, compared to 71.27 percent of the U.S. population. In 2003/2004, the nationwide rate increased to 72.83 percent—a statistically significant change—and the Missouri rate increased to 69.41 percent. In 2004/2005, the Missouri rate remained virtually unchanged at 69.74 percent while the U.S. rate again increased significantly to 74.35 percent. Although smaller percentages of adolescents than adults perceive great risk in smoking one or more packs of cigarettes per day, their percentages are increasing nationwide and in Missouri. Among Missouri's population 12-17 years of age, perceived risk increased from 61.78 percent in 2002/2003 to 63.07 percent in 2003/2004, and then statistically increased to 65.95 percent in 2004/2005. During this time period, the U.S. rate for adolescents increased from 63.67 percent in 2002/2003 to 65.87 percent in 2003/2004 and to 67.94 percent in 2004/2005. Both of these national rate increases for this age group were statistically significant. Young adults 18-25 years of age have also made some progress in recognizing smoking risk. While Missouri's young adults had an estimated rate of 61.37 percent in 2002/2003, the national rate was 65.46 percent. Both of these rates increased significantly in 2003/2004 to 65.29 percent in Missouri and 67.81 percent in the U.S. In 2004/2005, Missouri's rate was 64.66 percent while the national rate continued to advance to 69.82 percent. Perceived smoking risk has not changed significantly among Missouri adults older than 25. Missouri's rate for this age group was 70.06 percent in 2002/2003, 71.02 percent in 2003/2004, and 71.17 percent in 2004/2005. Nationwide, statistically significant gains have occurred during these years. The U.S. rate for older adults increased from 73.33 percent in 2002/2003 to 74.67 percent in 2003/2004, and then increased to 76.02 percent in 2004/2005.

Other NSDUH Measures: Implications of the NSDUH survey data are summarized in the *Substance Abuse Treatment Need* section on page 19. These include estimates of alcohol abuse and dependence, illicit drug abuse and dependence, co-occurring substance abuse and mental health disorders, and unmet need for treatment.

Youth Risk Behavior Survey

The Youth Risk Behavior Survey (YRBS) is administered by the federal Centers for Disease Control and Prevention. The survey is conducted nationwide to students in high school grades 9-12 every two years. It uses a sampling methodology that provides national and state estimates. Among the data collected by the survey are lifetime and current use of alcohol, tobacco, and illicit drugs—and use of these substances before age 13. The tables on pages 46 and 47 provide estimated percent-

tages of students nationwide and in Missouri for several survey items. The estimates are provided for odd-numbered years from 1995 to 2005. Because sampling is used, the estimated percentage for each item is the midpoint of the probable range—or confidence interval—of the actual population percentage. Many confidence intervals (shown in italics) for two years overlap. The overlap indicates that apparent changes in that population between the years can be due to sampling error rather than actual changes in rates. Similarly, many confidence intervals of the estimates overlap for two populations (e.g. Missouri 10th grade versus 12th grade, or Missouri 10th grade versus U.S. 10th grade), suggesting that their actual rates might not be different. The discussions below are based on the midpoint estimates. Statistically significant rate changes and differences are specially noted.

Alcohol: Based on the YRBS, current (past 30-day) use of alcohol among Missouri's high school students fell from 49.2 percent in 2003 to 40.8 percent in 2005—a statistically significant reduction. Binge drinking (consuming five or more drinks in a row) in the 30 days preceding the survey was reported by 30.5 percent of the students in 2003 but only 24.9 percent in 2005. Students in the 9th grade had the largest reductions on both of these measures, with current use decreasing from 44.4 percent in 2003 to 30.4 percent in 2005 and binge drinking decreasing from 25.3 percent to 13.6 percent. The percentage of students reporting that they began drinking before age 13 changed little between 2003 and 2005, but it declined considerably in the last decade from 39.9 percent in 1995 to 24.2 percent in 2005. U.S. high school students had much smaller, non-significant reductions, with an estimated rate of 43.3 percent in 2005 compared to 44.9 percent in 2003. In 2005, Missouri's high school students had lower estimated rates of alcohol use and binge drinking than students nationwide.

Tobacco: According to YRBS results, past 30-day use of any tobacco product by high school students in Missouri has been decreasing. In 1999, an estimated 39.0 percent of Missouri students were current users of cigarettes, cigars, chewing tobacco, snuff, or dip. Tobacco use was 36.2 percent in 2001, 29.7 percent in 2003, and 27.0 percent in 2005—a statistically significant reduction from the 1999 rate. During this same time period, tobacco use among students nationally declined from 40.2 percent in 1999 to 28.4 percent in 2005.

Cigarette Use: Cigarette smoking has similarly declined. In 1997, 40.3 percent of Missouri high school students smoked in the past 30 days. This rate dropped steadily to 32.8 percent in 1999, 30.3 percent in 2001, 24.8 percent in 2003, and 21.3 percent in 2005 to yield an overall significant reduction. Nationwide, past 30-day cigarette use by high school students has declined from 36.4 percent in 1997 to 23.0 percent in 2005. Lifetime cigarette use among Missouri high school students has declined remarkably. In 1995, 75.0 percent reported that they had ever tried cigarette smoking. This rate fell gradually to 63.3 percent in 2003 before dropping significantly to 49.6 percent in 2005. Students in grade 9 had the largest reduction—from 60.8 percent in 2003 to 40.7 percent in 2005. Meanwhile, the U.S. rate for lifetime use declined from 71.3 percent in 1995 to 54.3 percent in 2005. The percentage of Missouri students who reported that they smoked a cigarette before age 13 dropped to 14.8 percent in 2005, compared to 20.2 percent in 2003 and 25.7 percent in 2001. Compared to 2001, the 2005 estimate was statistically lower. The nationwide rate also dropped significantly—from 22.1 percent in 2001 to 16.0 percent in 2005.

Efforts to Quit Smoking: Among Missouri high school students who identified themselves as current smokers, an estimated 57.7 percent tried to quit smoking during the 12 months preceding the 2005 survey. In 2003, 54.6 percent tried to quit. Nationwide in 2005, 54.6 percent indicated that they tried to quit smoking—slightly more than the 53.8 percent who tried to quit in 2003.

Marijuana: Past 30-day (current) use of marijuana among Missouri high school students has been edging downward from its 1997 YRBS rate of 28.2 percent, reaching 18.1 percent in 2005. Nationwide, current use declined from 26.2 percent in 1997 to 20.2 percent in 2005. The estimated percentage of Missouri students who ever used marijuana dropped to 35.0 percent in 2005—the

lowest rate since administration of the YRBS began in the state. Among U.S. high school students in 2005, 38.4 percent had ever used marijuana. Missouri students who used marijuana before age 13 decreased from the YRBS peak rate of 13.6 percent in 1999 to 8.8 percent in 2005, virtually the same as the 2005 U.S. estimate of 8.7 percent.

Cocaine: Estimates of the percentage of Missouri high school students who ever used cocaine have fluctuated during the last decade without any statistically significant changes. The 2005 rate was 7.4 percent compared to a national rate of 7.6 percent. Past-month use of cocaine was reported by 3.0 percent of Missouri high school students and 3.4 percent of students nationwide in 2005. Missouri 9th graders had the lowest rate of use at 1.6 percent compared to a national rate of 3.0 percent for that grade level.

Methamphetamine: The percentage of Missouri high school students who ever used methamphetamine was 6.4 percent in 2005, compared to 6.2 percent among all U.S. high school students. The highest lifetime methamphetamine rates collected by the YRBS were 10.4 percent for Missouri students and 9.8 percent for U.S. students, both in 2001.

Ecstasy: Among Missouri high school students, the estimated percentage that ever used ecstasy (MDMA) declined from 6.7 percent in 2003 to 6.1 percent in 2005. The rates ranged from 3.8 percent for grade 9 to 8.5 percent for grade 12. Lifetime ecstasy use among U.S. high school students dropped sharply during the same time period. The national rate decreased from 11.1 percent in 2003 to 6.3 percent in 2005—a statistically significant reduction.

Inhalants: In 2005, 12.2 percent of Missouri's high school students had ever use inhalants—statistically lower than the 20.0 percent posted in 1995. Lifetime inhalant use rates in Missouri have closely paralleled the national rates, which dropped from 20.3 percent in 1995 to 12.4 percent in 2005.

Non-prescription Steroid Use: In 2003, an estimated 4.5 percent of Missouri high school students had ever used illicit steroids. This figure decreased to 3.5 percent in 2005. Steroid use among U.S. high school students declined significantly. Lifetime use decreased from 6.1 percent in 2003 to 4.0 percent in 2005.

Heroin: Based on analysis of the YRBS, 2.7 percent of Missouri high school students indicated in 2005 that they had ever used heroin. This rate is not statistically larger than the 1.7 percent rate in 2003 due to the size of the confidence intervals. The 2005 estimated rates were higher for students in grades 11 and 12 than in grades 9 and 10. Among high school students nationwide, 2.4 percent were lifetime heroin users and rates were highest for grades 9 and 10.

Injection Drug Use: In 2005, an estimated 2.3 percent of Missouri students in grades 9-12 had ever used a needle to inject an illegal drug, compared to 1.3 percent in 2003. The apparent increase is consistent with the estimated 1.0 percentage point increase in lifetime heroin use during this period. However, the difference in the rates is not statistically significant. Injection drug use among males was 3.1 percent—nearly twice the 1.6 percent estimate for females. Lifetime injection drug use rates in the U.S. dropped from 3.2 percent in 2003 to 2.1 percent in 2005.

Monitoring the Future Survey

Monitoring The Future (MTF) is a survey funded by the National Institute on Drug Abuse and conducted by the University of Michigan, Institute for Social Research. It is administered each year nationwide to students in grades 8, 10, and 12, college students, and young adults 19-28 years of age. The charts on pages 26-28 illustrate trends for past 30-day use of alcohol, cigarettes, marijuana, and cocaine. The tables on pages 40-44 provide past 30-day and lifetime use of all drugs included in the survey. Although state subsets of the MTF results are not available, rates from the Missouri Student Survey for grades 8, 10, and 12 are compared to the MTF national estimates in the next section.

Missouri Student Survey

The Missouri Student Survey (MSS) is a web-based survey conducted in even-numbered years throughout Missouri for students in grades 6 through 12, with a primary focus on grade 9. Prevalence rates from the 2006 MSS survey are shown in the table on page 48. The 2004 and 2006 MSS results are presented below. Statistical significance has not been determined for any of the apparent rates changes between years or the comparisons to the Monitoring The Future (MTF) national survey results.

Alcohol: All grade levels reported lower levels of current (past 30-day) use of alcohol in 2006 than in 2004. Students in grade 11 had the largest percentage point decrease, dropping from 51.14 percent in 2004 to 43.23 percent in 2006. The rate for Missouri students in grade 8 decreased from 27.06 percent in 2004 to 23.90 percent in 2006 but was still higher than the national rate. In 2006, only 17.2 percent of 8th grade students nationwide reported past 30-day use of alcohol. Among Missouri 10th grade students, alcohol use rates dropped from 45.73 percent in 2004 to 39.50 percent in 2006. Nationwide, 33.8 percent of 10th grade students were current alcohol users in 2006. Missouri's rate for grade 12 decreased slightly—from 50.97 percent in 2004 to 49.61 percent in 2006. High school seniors throughout the U.S. had a past 30-day alcohol use rate of 45.3 percent in 2006—the lowest rate for 12th graders in the 32-year history of the Monitoring The Future survey.

Binge Drinking: Binge alcohol use, consisting of at least five drinks on a single occasion at least once in the preceding two weeks, decreased among Missouri students in grades 7 through 12. The decline was greatest for students in grades 10 and 11. The binge drinking rate for Missouri 8th graders was 10.24 percent in 2004 and 9.32 percent in 2006—somewhat lower than the national rate of 10.9 percent for students in grade 8. Among 10th grade students, binge alcohol use in Missouri declined from 24.57 percent in 2004 to 19.45 percent in 2006. Nationally, binge drinking by students in grade 10 increased from 21.0 percent to 21.9 percent during the same time period. Missouri students in grade 12 had a binge drinking rate of 29.88 percent in 2006—a decrease from the 2004 rate of 33.74 percent, but higher than the 2006 national rate of 25.4 percent for high school seniors.

Tobacco: According to the MSS, cigarette smoking rates for Missouri students were lower in 2006 than in 2004. Students in grade 11 had the largest decrease in past 30-day cigarette use, dropping from 30.80 percent in 2004 to 21.63 percent in 2006. Students in grade 12 had virtually no decrease, with a rate of 28.04 percent in 2006 compared to 28.30 percent in 2004. Nationally, 21.6 percent of high school seniors reported current cigarette use on the 2006 MTF survey. Missouri students in grade 10 had a past 30-day smoking rate of 22.72 percent in 2004; this figure declined to 19.87 percent in 2006. By comparison, 14.5 percent of U.S. 10th graders were past 30-day cigarette smokers in 2006—a drop from 16.0 percent in 2004. Among Missouri's 8th grade students, smoking decreased from 15.22 percent in 2004 to 11.82 percent in 2006 while the national rate for grade 8 fell to 8.7 percent.

Marijuana: Between 2004 and 2006, current use of marijuana dropped in Missouri for all grade levels. The rate for high school seniors decreased almost three percentage points—from 17.50 percent to 14.60 percent. During this time period, the U.S. 12th grade rate for past 30-day marijuana use declined from 19.9 percent in 2004 to 18.3 percent in 2006. The rate for Missouri 10th graders was 13.57 percent in 2006, a little lower than the national rate of 14.2 percent. Marijuana use rates among Missouri students in grade 8 dropped from 7.23 percent in 2004 to 5.05 percent in 2006, while U.S. rates for 8th graders remained virtually unchanged at 6.5 percent.

Inhalants: Rates for past 30-day use of inhalants were generally higher in Missouri in 2006 compared to 2004. Students in grade 8 had the highest percentage of current use with a 2006 rate of 6.44 percent, an increase from 5.13 percent in 2004. According to the 2006 MTF Survey, only 4.1 percent of 8th grade students nationwide were current inhalant users. Among Missouri 7th grade students, inhalant use increased from 5.62 percent in 2004 to 6.25 percent in 2006. Students in

grade 6 had the third-highest level of inhalant use at 4.94 percent in 2006 compared to 4.16 percent in 2004. Missouri high school seniors posted the lowest level of past 30-day inhalant use with a rate of 1.92 percent in 2006—a slight increase from the 2004 rate of 1.80 percent and higher than the U.S. rate of 1.5 percent reported by the 2006 MTF survey.

Cocaine: The percentage of Missouri students reporting past 30-day use of cocaine increased for all grade levels in 2006. Use rates were progressively higher from grade 6 to grade 12. Among 12th grade students, 2.93 percent were current cocaine users in 2006 compared to 1.56 percent in 2004. According to the MTF surveys, cocaine use among U.S. high school seniors increased from 2.3 percent in 2004 to 2.5 percent in 2006. Missouri students in grade 10 had lower rates of cocaine use than their counterparts nationwide, although their past 30-day use increased from 1.03 percent in 2004 to 1.78 percent in 2006. The U.S. rate for 10th grade students increased to 2.3 percent in 2006. Among Missouri students in grade 8, current cocaine reached 1.90 percent in 2006 compared to only 1.01 percent in 2004. Nationwide, cocaine use among 8th grade students remained at 1.0 percent.

Methamphetamine: Past 30-day rates for methamphetamine use were higher for each ascending grade level in Missouri. In 2006, 2.17 percent of students in grade 12 were current users—a slight increase over the 2004 rate of 2.04 percent. Among 12th grade students throughout the United States, the rate was somewhat lower at 0.9 percent. Missouri's students in grade 10 had a cocaine use rate of 1.80 percent in 2006, reflecting little change from the 2004 rate of 1.88 percent. Methamphetamine rates for 10th graders nationwide have been declining in recent years, dipping to 0.7 percent in 2006 compared to 1.3 percent in 2004. Current use among Missouri 8th grade students decreased from 1.18 percent in 2004 to 0.82 percent in 2006 but remained slightly higher than the national rate of 0.6 percent.

Non-prescription Steroid Use: Missouri rates for lifetime use of steroids without a prescription were generally lower in 2006 than in 2004. Rates increased with grade level, with students in grade 12 posting a lifetime use rate of 2.92 percent in 2006—an increase from the 2004 rate of 2.04 percent. Nationwide in 2006, 2.7 percent of high school seniors acknowledged that they had ever used non-prescription steroids. Use rates for all other grades were lower in Missouri in 2006 than in 2004. Missouri 10th grade students had a lifetime rate of 2.60 percent compared to the national rate of 1.8 percent. Among students in grade 8, Missouri's lifetime steroid use rate of 2.52 percent was considerably higher than the U.S. rate of 1.6 percent.

Missouri College Health Behavior Survey

Missouri Partners in Prevention annually administers behavioral surveys on 12 Missouri college campuses. The program used the Core Alcohol and Drug Survey for years 2004 through 2006 and the Missouri College Health Behavior Survey (MCHBS) in 2007. An item of particular interest is binge drinking, defined as consuming five or more drinks in one sitting at least once during the two weeks preceding the survey. In 2004, binge drinking was reported by 49.9 percent of Missouri's college students compared to 48.8 percent of college students nationwide. In 2005, however, Missouri's college binge drinking rate dipped slightly to 48.4 percent while the national rate fell to 30.0 percent. Missouri's rate remained virtually unchanged at 48.8 percent in 2006. As recorded by the MCHBS, binge drinking declined to 31.9 percent on the 12 Missouri college campuses in 2007.

SUBSTANCE ABUSE TREATMENT NEED

Alcohol and Drug Dependence and Abuse

The *Diagnostic and Statistical Manual of Mental Disorders, 4th Edition (DSM-IV)* specifies the criteria for alcohol and drug dependence and abuse. The National Survey on Drug Use and Health (NSDUH) includes items designed to identify substance dependence and abuse based on the DSM-IV criteria. The NSDUH uses a sampling methodology that provides national, state, and sub-state percentage estimates. Consecutive years are combined to increase sample sizes and improve the reliability of the estimates. The most recent state estimates are based on samples from years 2004 and 2005 combined and are displayed with U.S. comparisons in the table on page 38. Missouri population estimates based on these rates are shown on page 39. Sub-state (regional) estimates use samples from years 2002-2004. Annually, an estimated 10.14 percent of the Missouri population 12 years of age and older were dependent on or abused alcohol or illicit drugs in 2004/2005. This rate is lower than the estimate of 10.58 percent for 2003/2004 but still higher than the 2002/2003 estimate of 9.58 percent. By comparison, the national rate was 9.22 percent in the 2002/2003 and 2003/2004 samples and 9.25 percent in 2004/2005. Estimated regional rates range from a high of 10.96 percent in the Central Region to a low of 8.57 percent in the Southeast Region. Urban sub-regions have high rates, including 11.00 for Jackson County and 10.97 percent for St. Louis City/County combined. Based on the statewide rate of 10.14 percent, Missouri has 485,000 individuals with alcohol or illicit drug dependence or abuse. An estimated 8.93 percent of Missouri adolescents and adults—or 427,000—have alcohol dependence or abuse, and 3.00 percent—or 143,000—have illicit drug dependence or abuse. The separate alcohol and illicit drug rates and population estimates exceed the combined totals because some individuals—approximately 80,000—are dually dependent on, or abuse, alcohol and illicit drugs.

The 2004/2005 NSDUH samples indicate that 9.80 percent of Missouri adolescents 12-17 years of age have alcohol or illicit drug dependence or abuse. This rate is somewhat higher than the national rate of 8.44 percent for this age group. The estimated 48,000 Missouri adolescents in this group include 34,000 with alcohol dependence or abuse and 28,000 with drug dependence or abuse. The alcohol and illicit drug estimates exceed the combined total by 14,000. This overlap represents adolescents with both alcohol and illicit drug problems.

Young adults 18-25 years of age have the highest rates of substance abuse. Among Missouri's young adults, 24.62 percent have a problem with alcohol or illicit drugs—considerably higher than the U.S. rate of 21.50 percent for this age group. Missouri has an estimated 137,000 young adults with alcohol dependence or abuse, 62,000 with illicit drug dependence or abuse, and a total of 161,000 with alcohol or illicit drug dependence or abuse. Approximately 38,000 overlap the two categories and have a dual dependency or abuse problem.

Adults in the age group 26 and older have the lowest overall rates of substance abuse. Based on Missouri's 2004/2005 NSDUH results, 7.59 percent of these older adults have alcohol or illicit drug dependence or abuse, compared to 7.20 percent nationwide. Although Missouri's rate of 7.03 percent for this age group matches the state's adolescent rate of 7.04 percent for alcohol dependence or abuse, illicit drug dependence or abuse is much less prevalent with a rate of 1.47 percent—lower than the national rate of 1.68 percent. The rates indicate that 276,000 Missouri residents older than age 25 have a substance abuse problem, comprising 256,000 with alcohol dependence or abuse and 53,000 with illicit drug dependence or abuse. Almost one percent of Missouri's older adult group—or 33,000—have a dependence or abuse problem with both alcohol and illicit drugs.

Co-Occurring Mental Health Problems

Besides assessing respondents for substance dependence and abuse, the National Survey on Drug Use and Health (NSDUH) identifies Serious Psychological Distress (SPD) and Major Depressive Episode (MDE) mental health problems. Using combined data from the 2004 and 2005 surveys, an annual average of 14.06 percent of Missouri adults 18 years of age and older—approximately 603,000—had an episode of SPD in the year preceding the survey. The comparable U.S. rate was 11.63 percent. The SPD rate was 21.33 percent for Missouri's young adults in the 18-25 age group and 12.76 percent for Missourians age 26 and older. Among Missouri residents 12 years of age and older, an estimated 412,000 experienced a past-year MDE. Missouri adolescents 12-17 had a MDE rate of 8.80 percent and young adults 18-25 had a rate of 9.77 percent, both slightly lower than the national rates for those age groups. However, Missouri adults 26 years of age and older had a past-year MDE rate of 8.38 percent—affecting 305,000—compared to the national rate of 7.25 percent for that age group.

Nationwide substance abuse rates are considerably higher among individuals with SPD and MDE than for the general population. According to the 2005 NSDUH results, 21.3 percent of U.S. adults age 18 and older with SPD abused or were dependent on alcohol or illicit drugs. Adults without SPD had a dependence/abuse rate of only 7.7 percent in 2005. Although 7.3 percent of the adult population had a MDE in 2005, adults with substance dependence or abuse had a MDE rate of 15.6 percent while those without dependence or abuse had a MDE rate of only 6.4 percent.

Unmet Need for Substance Abuse Treatment

Based on combined 2004 and 2005 data from the National Survey on Drug Use and Health (NSDUH), an annual average of 8.26 percent of Missouri's population age 12 and older needed—but did not receive—treatment for alcohol dependence or abuse. This percentage is higher than the national rate of 7.35 percent for unmet alcohol treatment need and equates to 395,000 Missouri residents. In addition, an estimated 2.84 percent of this age group in Missouri—or 136,000—have an unmet need for treatment of illicit drug dependence or abuse. The age group 18-25 has the highest rates of unmet treatment need in Missouri and nationwide. An estimated 19.65 percent of Missouri's young adults—approximately 129,000—need treatment for alcohol problems, compared to the U.S. rate of 16.92 percent for that age group. Unmet need for illicit drug treatment is also higher among young adults in Missouri with a state rate of 8.69 percent affecting 57,000 compared to a national rate of 7.74 percent. Among Missouri's adolescents 12-17 years of age, an estimated 33,000 have an unmet need for alcohol treatment and 25,000 have an unmet treatment need due to illicit drug problems. Missouri's rates for unmet treatment need are similar to the U.S. rates for the population ages 26 and older. An estimated 233,000 Missouri residents in that age group have an unmet need for alcohol treatment and 53,000 have an unmet need for treatment for illicit drug dependence or abuse.

CONSEQUENCES DATA HIGHLIGHTS

Health and Mortality

Prenatal exposure to alcohol, tobacco, and other drugs jeopardizes the fetus. Maternal use of these substances during pregnancy puts the newborn at risk for low birth weight, drug withdrawal, and lifelong impairments including serious birth defects and mental retardation. Substance abuse during pregnancy showed little change in 2005. The reported number of newborns whose mothers drank alcohol during their pregnancies was 473 in 2005. Studies have shown that alcohol use during pregnancy is substantially underreported, so the actual number of babies at-risk for fetal alcohol syndrome and fetal alcohol effects is unknown but much higher than this. Hospitals reported 300 drug-affected births in 2005, but illicit drug use by pregnant women is also underreported. In 2005, hospitals reported 14,317 births to women who smoked during their pregnancies—the highest number since 1997—involving 18.3 percent of Missouri's live births.

Communicable diseases such as hepatitis and HIV/AIDS are often acquired through substance abuse. Hepatitis C cases continued to increase, reaching 3,829 in 2005 compared to 3,150 in 2004. In 2005, 500 Hepatitis B cases were reported, a decrease from 529 in 2004. The cumulative number of HIV cases reported in Missouri reached 4,897 in 2005, while cumulative AIDS cases slowed to 9,837—only 27 more than the 2004 total.

Alcohol, tobacco, and drug related deaths are estimated because these substances sometimes contribute to diseases and events that are identified as the immediate causes of death. Smoking-attributable deaths totaled 9,548 in Missouri in 2005, an increase from the 2004 estimate of 9,396. Drug related deaths continued to increase, reaching 674 in 2005 compared to 591 in 2004. Alcohol related deaths decreased from 383 in 2004 to 327 in 2005.

Hospital and emergency room episodes resulting from alcohol and drug abuse increased in 2005. Alcohol related cirrhosis episodes increased from 3,492 in 2004 to 3,621 in 2005. All other alcohol related episodes totaled 46,451 in 2005 compared to 45,747 in 2004. Drug related episodes increased 8.1 percent, rising from 38,606 in 2004 to 41,735 in 2005.

Public Safety and Law Enforcement

Traffic crashes involving an alcohol-intoxicated driver or pedestrian decreased from 8,301 in 2004 to 7,888 in 2005—amounting to 4.5 percent of all vehicle crashes and a rate of 11.47 crashes per 100 million miles of vehicle travel in Missouri. Alcohol related fatal crashes increased to 253 and accounted for 22.6 percent of all fatal crashes and 3.2 percent of the alcohol-involved crashes. Drug-related crashes decreased from 955 in 2004 to 940 in 2005, but 3.3 percent of them resulted in fatalities compared to 1.8 percent in 2004.

Arrests for driving under the influence of alcohol or drugs increased slightly to 35,551 in 2005 and arrests for intoxicated boating increased from 352 in 2004 to 476 in 2005. Drug arrests also increased—to 42,371 in 2005. However, methamphetamine lab seizures continued to decline from the 2003 peak of 2,860, falling to 2,252 in 2005 and 1,284 in 2006.

Court and Corrections

Juvenile court referrals for alcohol and drug offenses declined in 2005. Only 1,055 alcohol violations were referred to juvenile court—the lowest number in many years. Juvenile drug referrals totaled 3,131 and reached their lowest level since 1995. In 2005, juvenile courts ordered out-of-home placements for 2,306 children due to substance abuse by their parents. These placements constituted almost 36 percent of all removals and included 305 resulting from parental alcohol use, 1,776 caused by parental drug use, and 225 involving parental alcohol and drug use.

Drug offenses accounted for 36.5 percent of probation and parole openings and 34.6 percent of prison admissions in fiscal year 2006. Intoxicated driving resulted in an additional 4.8 percent of the probation and parole caseload and 5.3 percent of state incarcerations.

YOUTH AND TOBACCO IN MISSOURI

Youth Tobacco Access and Possession Laws

- No Tobacco Sales to Persons under Age 18: Missouri state law prohibits the selling of tobacco products to anyone under the age of 18 years. Merchants are also required to post a state law sign at every tobacco display, including cigarette machines. (*RSMO 407.926-407.927*)
- State Law Enforcement: The Department of Public Safety, Division of Alcohol and Tobacco Control has the authority to enforce the state's laws related to the control and sale of tobacco. (*RSMO 407.934*)
- Vending Machines: As of January 1, 2002, vending machines are required to be located within employee's line of sight or be equipped with a locking device. Vending machines located in areas where patrons must be over the age of 18 or in places not generally accessible to the general public are exempt from this requirement. (*RSMO 407.931*)
- Minor Possession: No person under the age of 18 shall purchase, attempt to purchase, or possess tobacco products unless in the course of employment. Persons under the age of 18 will have their tobacco products confiscated. (*RSMO 407.933*)
- Tobacco Registry: The Department of Revenue is required to establish and maintain a listing of establishments that sell tobacco products in the state. (*RSMO 407.934*)
- Federal Regulation: Federal Synar regulation, administered by the U.S. Department of Health and Human Services, requires all states to establish laws that make it unlawful to sell or distribute tobacco products to any individual under the age of 18 years and to enforce such laws in a manner that can reasonably be expected to reduce youth access to tobacco products. It also requires states to annually measure compliance through random, unannounced inspections. All states are expected to achieve a violation rate of no more than 20 percent. (*42 U.S.C. 300x-26 and 45 C.F.R. 96.130*)

Current Status of Tobacco Use and Merchant Compliance

- Youth Lifetime Use: In 2005, nearly 50 percent of Missouri high school students surveyed reported that they had tried cigarette smoking—down from the 67 percent reporting lifetime use in 2003. The next Missouri Youth Risk Behavior Survey is scheduled for 2007.
- Youth Current Use: In 2005, 26.5 percent of Missouri high school seniors reported current use of cigarettes—slightly higher than the previous year's rate of 21.4 percent yet down significantly from a high of 48.2 percent in 1997. The recent figure for the state is comparable but somewhat higher than that for the country as a whole. The percent of U.S. high school seniors reporting current use of cigarettes was 23.2 percent.

- **Merchant Compliance:** In 2006, an estimated 6.3 percent of Missouri merchants failed to deny cigarettes and/or smokeless tobacco to individuals under the age of 18 years—little change from the previous year. For the past seven years, the State has realized a non-compliance rate below the long-term Synar target rate of 20 percent. The State has used a combination of law enforcement and merchant education activities in order to bring down the non-compliance rate from a high of 40 percent (baseline year) to a rate less than the 20 percent target rate.

State Initiatives Aimed at Youth Tobacco Access

- **Law Enforcement Surveillance and Inspections:** The Division of Alcohol and Tobacco Control (DATC) has 36 field agents to enforce both alcohol and tobacco laws. Between October 2005 and July 2006, DATC conducted 92 server trainings in which 2,152 individuals were trained. During the same time period, DATC conducted 258 enforcement checks. Of these, 112 were found non-compliant with resulting dispositions of 60 letters of reprimand, 32 exemptions from penalties, and 20 pending for dispositions.
- **Merchant Education Program:** The Division of Alcohol and Drug Abuse (ADA) continues to conduct a comprehensive merchant education program that includes mailings, educational visits, compliance checks, and feedback to clerks and owners/managers.

In January 2006, ADA printed and distributed 7,300 “age checker” calendars. In addition, educational phone contacts and visits to tobacco outlets were made to provide merchants with information regarding the state's laws on youth access to tobacco products. An initial phone contact was made in February 2006. Between March and May 2006, the prevention teams conducted walk-in visits to tobacco retailers in the state. Retailers generally received two visits. In total, 11,698 walk-in visits were conducted in which contact was made with the store owner, manager, and/or other employees.

Throughout the year, compliance checks are conducted in which a youth age 16 or 17 attempts to purchase a tobacco product. If the mode of purchase is over-the-counter, the event is considered a successful unconsummated buy if the retail clerk fails to request ID or the age of the youth prior to requesting payment for the tobacco product and fails to refuse the sale. If the mode of purchase is vending machine, the event is considered a successful unconsummated buy if the youth is able to insert a quarter into the vending machine and leave the premises without intervention by store employees whereby they request ID or the age of the youth. During these checks, the youth inspectors purchase no tobacco products. If the check results in a successful (unconsummated) buy, the clerk receives a caution card. The check is followed-up by a caution letter to the owner/manager generally within two weeks of the check. If the store employee refuses the sale, the store employee is given a congratulatory card. These checks are followed up with a congratulatory letter to the owner/manager of the retail establishment. Between August 2005 and July 2006 there were 3,169 checks (including Synar checks), with 283 (9.8%) resulting in the issuance of caution cards.

* Data prior to 2005 are updated.

** Due to implementation of federal Uniform Crime Reporting in 2001, data totals in these categories are not comparable to pre-2001 totals.

*** Prior to calendar year 2001, lab seizures were reported by multiple participating law enforcement agencies, resulting in duplicated counts. Beginning in 2001, each lab seizure, chemical or equipment seizure, and dumpsite clean-up are counted once in the National Clandestine Laboratory Seizure System.

Treatment consumers, described in the data below beginning with GENDER, are counted once for each type of treatment program (above) they entered during the fiscal year. In years prior to the Primary Recovery designation, detoxification and treatment services equivalent or similar to the Primary Recovery services are included in those categories. Clinical SATOP includes Clinical Intervention Program, Youth Clinical Intervention Program, and Serious and Repeat Offender Program. Admissions for non-clinical SATOP, Codependency (significant other), and Compulsive Gambling services listed below are not included in the demographics. Statewide, regional, county, and category totals may not match due to non-inclusive categories and incomplete data. Services provided to Missouri non-residents are not included.

SUBSTANCE ABUSE TRAFFIC OFFENDER PROGRAM (SATOP)

	FY2006	FY2005	FY2004	FY2003
Offender Management Unit	31,133	30,920	33,293	34,229

ALCOHOL ADMISSIONS, FISCAL YEAR 2006

13,689 Admissions ¹

¹ Admission records are unduplicated by Client Identification to provide a count of clients admitted during the fiscal year.

² Admission records are unduplicated by Client Identification and Program Category to provide a count of clients admitted to each program.

MARIJUANA ADMISSIONS, FISCAL YEAR 2006

9,926 Admissions¹

¹ Admission records are unduplicated by Client Identification to provide a count of clients admitted during the fiscal year.

² Admission records are unduplicated by Client Identification and Program Category to provide a count of clients admitted to each program.

COCAINE ADMISSIONS, FISCAL YEAR 2006

5,609 Admissions¹

¹ Admission records are unduplicated by Client Identification to provide a count of clients admitted during the fiscal year.

² Admission records are unduplicated by Client Identification and Program Category to provide a count of clients admitted to each program.

METHAMPHETAMINE ADMISSIONS, FISCAL YEAR 2006

4,628 Admissions¹

¹ Admission records are unduplicated by Client Identification to provide a count of clients admitted during the fiscal year.

² Admission records are unduplicated by Client Identification and Program Category to provide a count of clients admitted to each program.

HEROIN ADMISSIONS, FISCAL YEAR 2006

1,577 Admissions¹

¹ Admission records are unduplicated by Client Identification to provide a count of clients admitted during the fiscal year.

² Admission records are unduplicated by Client Identification and Program Category to provide a count of clients admitted to each program.

OTHER DRUG ADMISSIONS, FISCAL YEAR 2006

1,508 Admissions¹

¹ Admission records are unduplicated by Client Identification to provide a count of clients admitted during the fiscal year.

² Admission records are unduplicated by Client Identification and Program Category to provide a count of clients admitted to each program.

Primary Recovery Treatment	1,354	2,017	1,701				
Recovery Supports	939			OTHER SERVICES PROVIDED			
Clinical SATOP	220	212	201	Codependency	283	304	305
Other Substance Abuse Treatment	345	357	185	Compulsive Gambling	17	21	26

Treatment consumers, described in the data below, are counted once for each type of treatment program (above left) they entered during the fiscal year. Clinical SATOP includes Clinical Intervention Program, Youth Clinical Intervention Program, and Serious and Repeat Offender Program. Admissions for non-clinical SATOP, Codependency, and Compulsive Gambling services listed on the right side above are not included in the data below. Statewide, regional, county, and demographic category totals may not match due to non-inclusive categories and incomplete data.
